

7.9 Exercise Sheet

Exercise 109. Give a formal proof of $(p \wedge r)$ from $\{((q \wedge r) \wedge q), (p \wedge p)\}$.

Exercise 110. Show the validity of the following sequents:

1. $(p \wedge q), r \vdash (p \wedge (r \vee r'))$;
2. $(p \rightarrow (q \rightarrow r)) \vdash ((p \wedge q) \rightarrow r)$;
3. $((p \wedge \neg r) \rightarrow q), \neg q, p \vdash r$;

Exercise 111. Finish the game at <https://profs.info.uaic.ro/~stefan.ciobaca/1nd.html>. Do not cheat. It is considered cheating if you change the JavaScript source code, if someone else solves a level for you or if you prove the derived rules using the derived rules themselves.

Exercise 112. Prove that the following inference rules are derivable:

1. $\neg\neg i$;
2. LEM (law of excluded middle): $\text{LEM} \frac{}{\Gamma \vdash (\varphi \vee \neg\varphi)}$;
3. PBC (proof by contradiction): $\text{PBC} \frac{\Gamma, \neg\varphi \vdash \perp}{\Gamma \vdash \varphi}$;
4. MT (modus tollens): $\text{MT} \frac{\Gamma \vdash (\varphi \rightarrow \varphi') \quad \Gamma \vdash \neg\varphi'}{\Gamma \vdash \neg\varphi}$.

Exercise 113. Prove the soundness theorem for natural deduction (by induction on the number of sequents in the formal proof).

Exercise 114. Show that the rule $\neg\neg e$ is derivable using the LEM (i.e., you may use LEM in the derivation, but not $\neg\neg e$).

Exercise 115. Prove, using the soundness and completeness theorems, that $\varphi_1 \Vdash \varphi_2$ if and only if $\varphi_1 \equiv \varphi_2$.
